## **Instructions and What to Expect From Your VNG**

**\*\*\*PLEASE READ CAREFULLY 48 HOURS BEFORE TESTING\*\*\***

### **Your Time at the Appointment**

Videonystagmography (VNG) is a series of tests designed to evaluate the balance system commonly referred to as the "inner ear." During the VNG, goggles housing sophisticated cameras will be placed over your eyes and will monitor your eye movements to record nystagmus. Nystagmus is a rapid, involuntary eye movement generated by the balance system. For most tests you will be seated, observing lights. The last portion of testing is called caloric testing. For this portion, you will be lying down and cool/warm air will be introduced to the ear. Throughout the testing, we will make every attempt to make your visit comfortable as well as educational. The exam takes approximately one hour. You may experience brief episodes of dizziness during some portions of the test.

Once your evaluation is completed each part is carefully evaluated and reviewed. Once the interpretation has been made a detailed report will be forwarded to your referring physician. You will be contacted to schedule a follow up appointment with them to review the results and discuss treatment options.

### **Transportation**

Because the sensation of motion will sometimes linger after testing, if possible we encourage you to have someone accompany you to and from the appointment. If this is not possible try and plan your day to include at least an extra 15 to 30 minutes after your appointment before leaving the office.

### **Insurance and Paperwork**

**Please remember to bring your insurance information** as we are a separate office and will need this for our records. You will be asked to fill out medical information, as we are required to have this for our records. If you do not have the paperwork completed, please plan to arrive at your appointment 30 minutes before the scheduled time to complete this information.

### **Meals**

Please eat lightly for 12 hours prior to your appointment. If your appointment is in the morning you may have a light breakfast such as toast, avoid acidic drinks such as orange juice. If your appointment is in the afternoon you may have a light breakfast and a light snack for lunch. **Please avoid caffeine beverages such as coffee or soft drinks.**

### **MRI**

If you schedule an MRI before your appointment, you must schedule it three hours prior. If you know you will need sedatives for your MRI, it will need to be done on a different day. Sedatives can influence the body's response to the test, thus giving a false or misleading result.

### **Make-Up**

Due to the sensitive nature of the infra red goggles, **please do not wear any eye or facial make-up to your appointment.** This includes eyeliner, eye shadow, mascara, false eye lashes, etc.

### **Medication etc.**

Certain substances can influence the body's response to the test, thus giving a false or misleading result. **Therefore you must refrain from certain medications and alcohol for 48 hours before testing.** There is a partial list of medications on the following page which need to be held for 48 hours before testing. **DO NOT refrain from life sustaining medications.** If you have any questions about medications that you are currently taking, please call our office for clarification.

**Failure to comply with these instructions will compromise test results and may result in your test being rescheduled for another day. Please notify the office within 24 hours if you cannot keep this appointment.**
